(a) Distinct feature-level targets
M_{direct}
Injected fields
(hidden clean row)
not in prompt
⊆
M_{value}
Changed values,
including proxies
M_{rule}
Rule-dependent
fields
$S^{\min}_{\text{rule}}$
Minimal rule-
sufficient sets
Mechanism labels differ from both minimal-set targets
$S^{\min}_{\text{support}}$
Primary: minimal sets
absent from clean support
(b) Related task contracts
Known-row task
Flagged row + references
Ranked feature subsets
Gold: support/rule minima
KPI root cause
Aggregate KPI + dimensions
Attribute-value combinations
Target: aggregate change
Score attribution
Fixed detector score
Feature attribution
Target: score fidelity
Detection benchmark
Records + row labels
Detect/classify anomalies
No subset-level gold
Combination search, different targets:
one supplied row versus an aggregate segment.
